Project Type: Water Development (new)

Brief Project Summary: Develop a new water catchment in the Plomosa Mountains to supplement Dripping Springs which has become a popular OHV destination. Proposal is to install a 10,000 gallon underground 24" PVC storage using natural collection and walk in drinking trough in a remote location approximately 1 mile northwest of Dripping Springs. Project would be in cooperation with the ADBSS.

NEED STATEMENT – PROBLEM ANALYSIS:

The project area contains an important population of bighorn sheep that has been used many times as a source for translocations. The nearest available water is a natural spring (Dripping Springs) that has become a popular OHV destination. The high volume of vehicular and human traffic has reduced the availability of the existing water source to wildlife populations. The addition of this new water source would restore and improve the quality of the habitat in this section of the Plomosa Range.

PROJECT OBJECTIVES:

Increase the quality and amount of available bighorn sheep and mule deer habitat during water stress periods.

PROJECT DESCRIPTION AND STRATEGIES:

Create a perennial water source using an underground PVC pipe design with natural collection area.

PROJECT LOCATION:

Plomosa Mountains, La Paz Co., AZ, (T.3 N. R.18 W. S.11) (33° 36.862'N 114° 05.731'W)

LAND OWNERSHIP AT PROJECT SITE (Please state specifically if PRIVATE PROPERTY and provide landowner's name):

U.S. Bureau of Land Management (Yuma Field Office)

IF PRIVATE PROPERTY, IS THERE A STEWARDSHIP or LANDOWNER AGREEMENT BETWEEN THE LANDOWNER AND THE DEPARTMENT?

YES[] NO[]

HABITAT DESCRIPTION:

The Plomosa Mountains have elevations ranging from 1350' near the base to 3402' at Dripping Springs Peak. The topography ranges from gentle bajadas and rolling hills to high benches, rugged cliffs, and ridges. Both Upper and Lower Sonoran desert scrub plant communities are represented in the proposal area. The next nearest perennial bighorn sheep water is 1.06 miles to the east-southeast.
